

The CoronaVirus

Introduction

Coronaviruses are a large family of viruses that are known to cause illness ranging from the common cold to more severe diseases, the least and the most dangerous version is what's out right now where there's no known treatment and it's easy to spread among the people by coughing or sneezing

Symptoms & Treatment

There's no cure or treatment so you have to take care of yourself by follownig these steps:

Wash your hands frequently with soap

Wear a mask if you have a cough or runny nose

See a doctor if you fell unwell

Don't go near living animals including poultry & birds

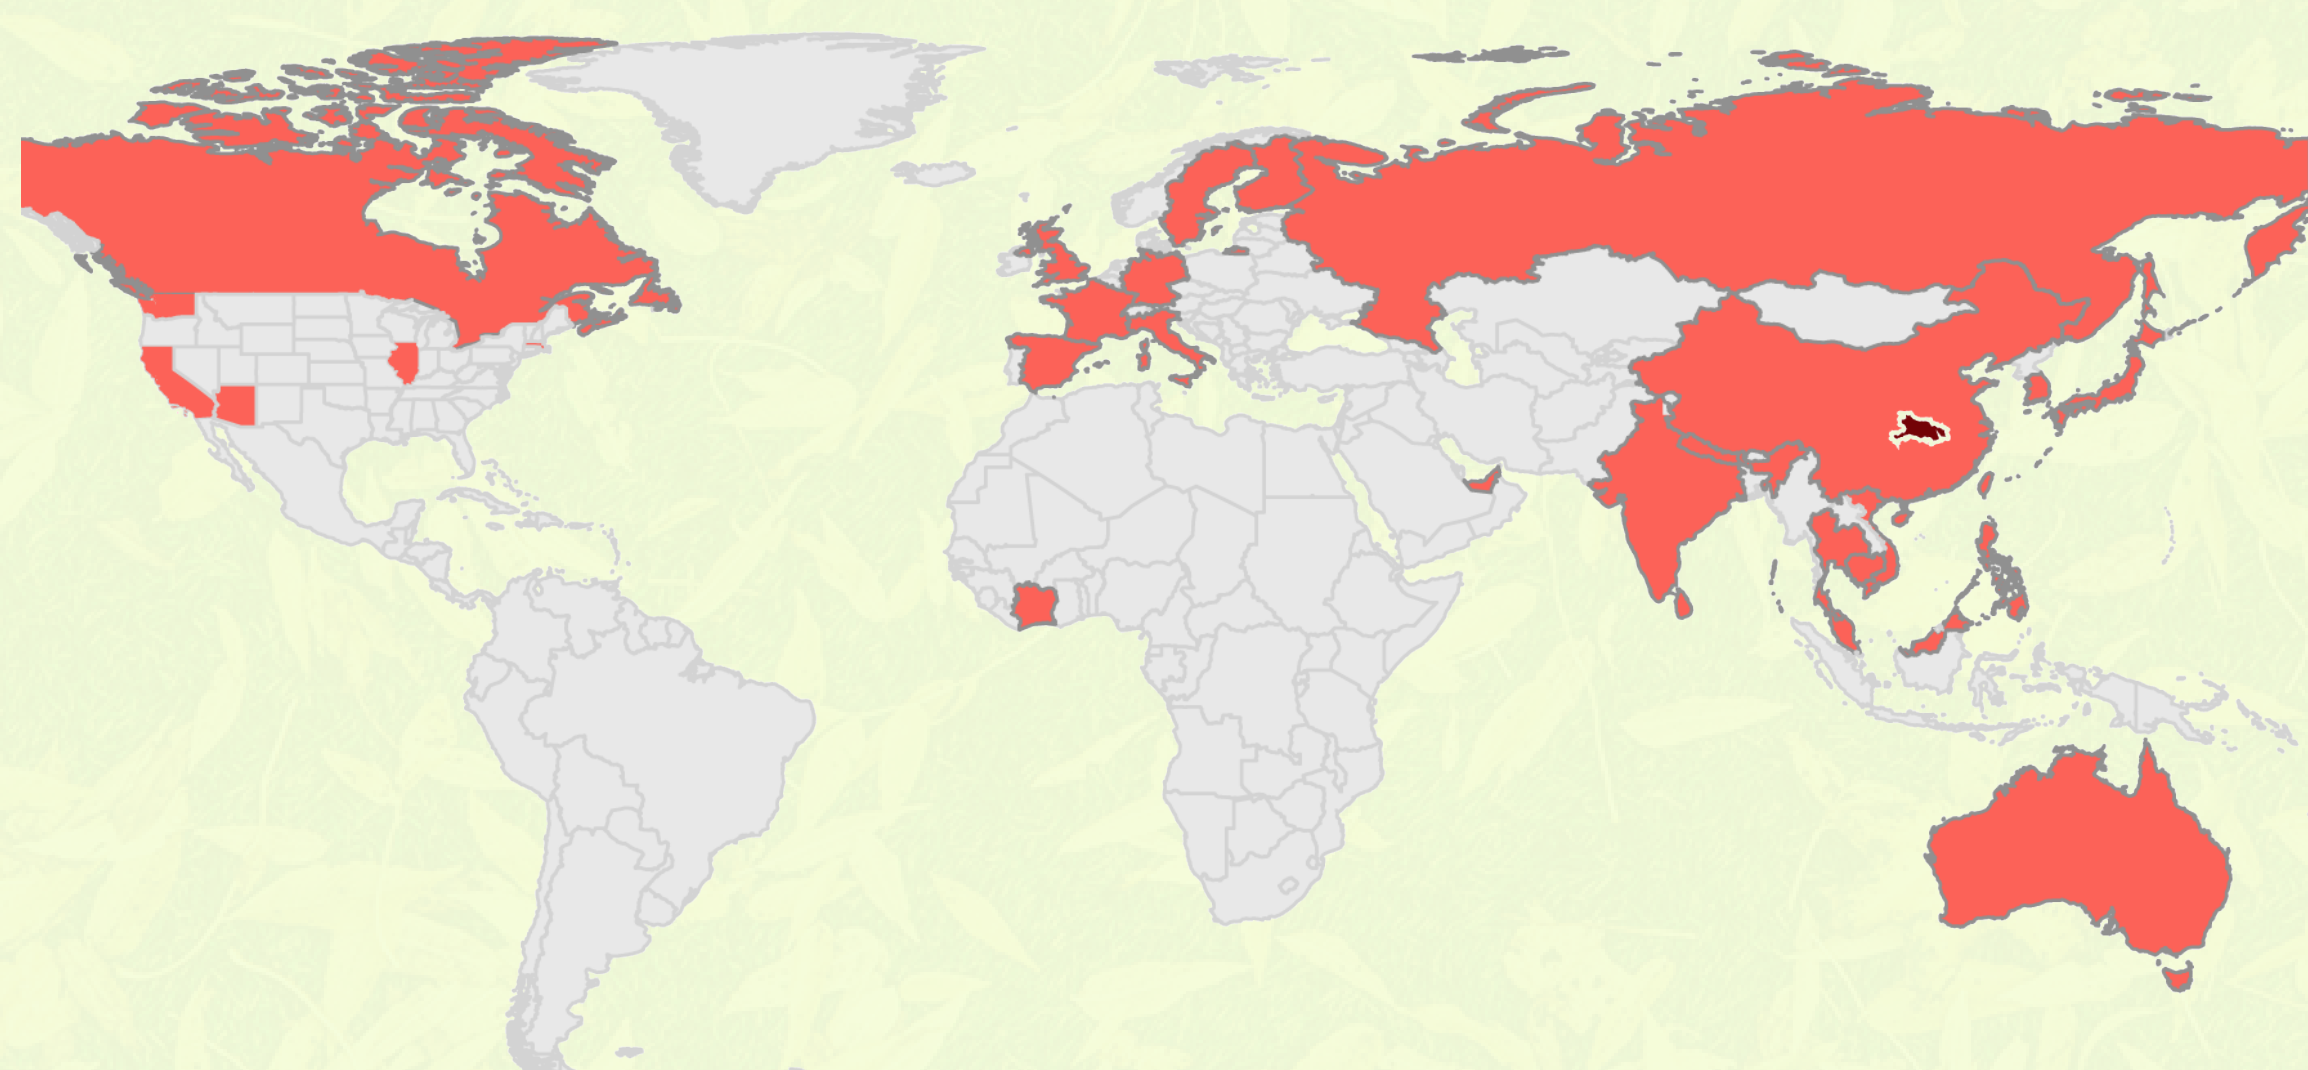

Don't be in crowded places & around people who are unwell

How to protect yourself

- If you are in an affected area avoid eating raw or undercooked animal products.
- Seek early medical help if you have a fever, cough and difficulty breathing
- Face masks offer some protection as they block liquid droplets. However, they do not block smaller aerosol particles that can pass through the material of the mask.
- Cover your mouth and nose with a tissue when you cough or sneeze, then throw the tissue in the bin and wash your hands.

Infected areas in the world right now
