Corona virus

Khadeja Mohammed 2261

What is Corona virus?

Coronaviruses are a family of hundreds of viruses that can cause fever, respiratory problems, and sometimes gastrointestinal symptoms too. The 2019 novel coronavirus Since emerging in China in December, this new coronavirus has caused a global health emergency, sickening more than 43,000 people worldwide, and so far, killing 1,018.

Treatment of Coronavirus

There is no specific treatment for disease caused by a novel coronavirus. However, many of the symptoms can be treated and therefore treatment based on the patient's clinical condition. Moreover, supportive care for infected persons can be highly effective

Coronavirus Symptoms

Symptoms vary from person-to-person, and some forms of the virus can be fatal, Symptoms include by touching people ,sneezing, runny nose, fatigue ,cough, fever in rare cases ,sore throat, exacerbated asthma

Precautions of coronavirus

Standard recommendations for preventing the spread of infection include:

- * Wash hands, cover your mouth and nose when coughing and sneezing.
- * Avoid close contact with anyone who has symptoms of respiratory illnesses such as coughing and sneezing.
- * Clean your hands frequently with rubbing your hands with alcohol or soap and water for at least 20 seconds.
- * If you have a fever, cough, and trouble breathing, seek medical attention early.
